Who are we?

Gian Motu
Foodie

We are a bunch of foodies who hate standing in long queues and who absolutely despise the waste of paper and food.

- YouEye5

Problem 1

01

SAP Labs India is a strong family of 14K+ employees who grab most of their meals from food counters thereby leading to longer queues which is also very time consuming.

02

Also, let's not forget about the fact that employees end up standing in two long queue's just to get one meal.

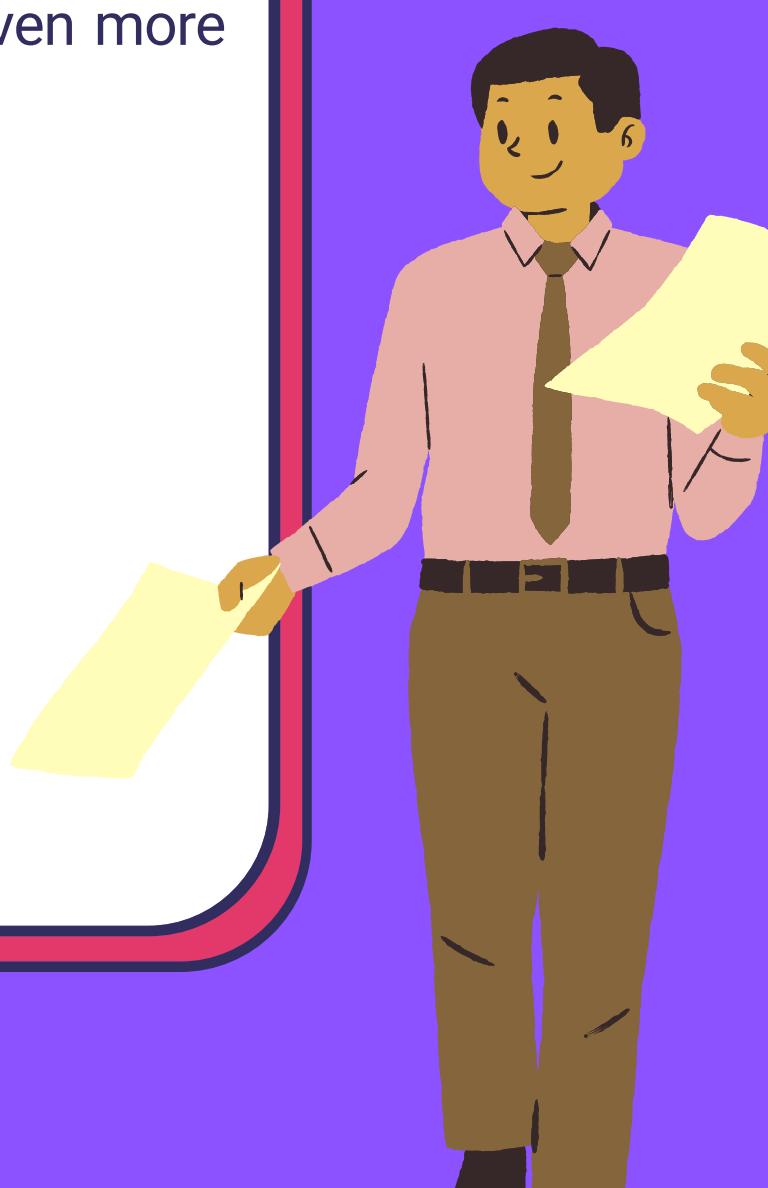

Problem 2

01

In order to get a meal, employees first stand in long queue's for receipts and then in even more longer queue's for the meal itself.

02

These daily tapped-in receipts lead to unnecessary paper wastage which can be avoided.

Problem 3

01

SAP Labs has around 7 varieties of food counters each day for lunch services and the staff needs to manage the number of portions of food prepared on each of these counters.

02

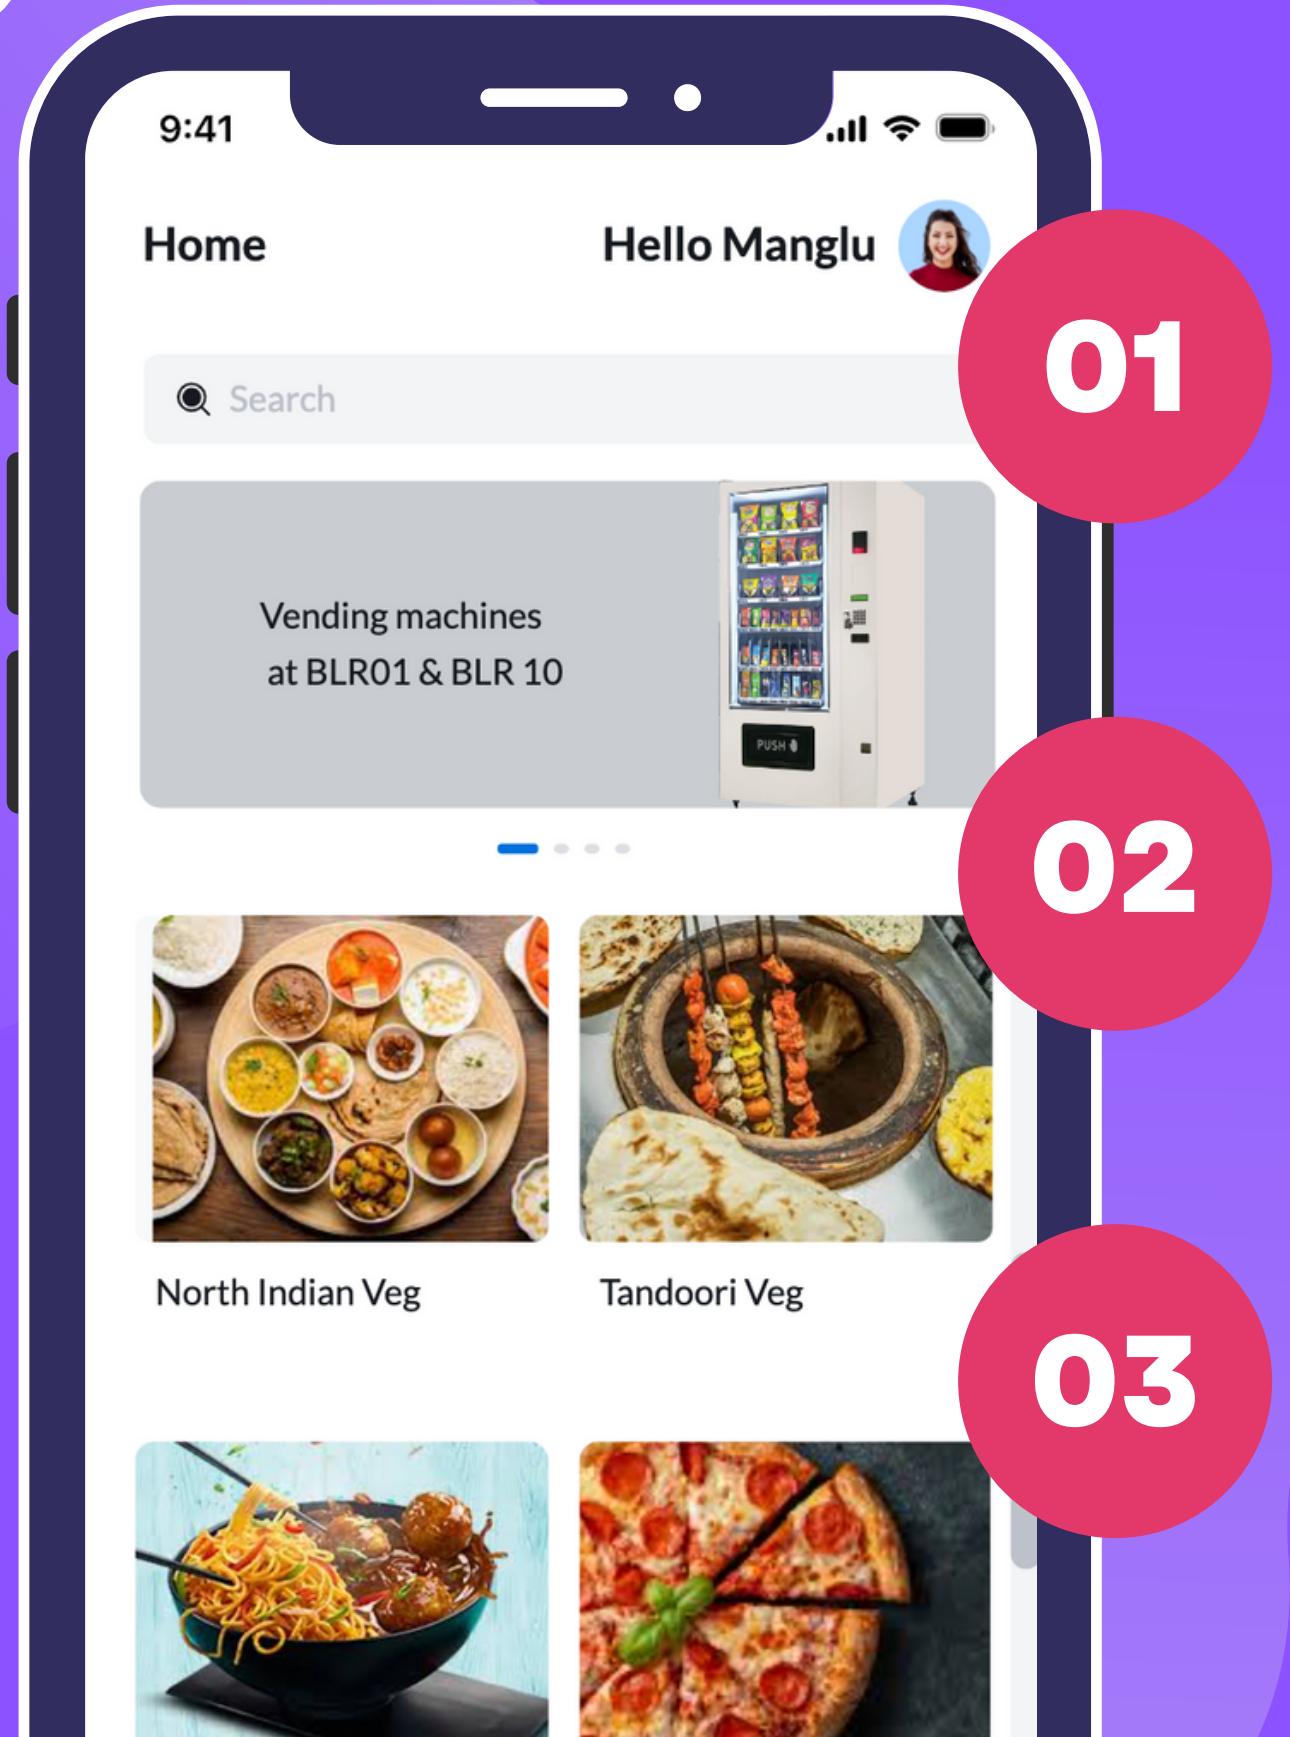

Preparing food for a huge crowd usually advances the wastage of food.

PROPOSED SOLUTION

iOS & Android
Application

LunchOn

01

An mobile application that allows you to place your lunch order

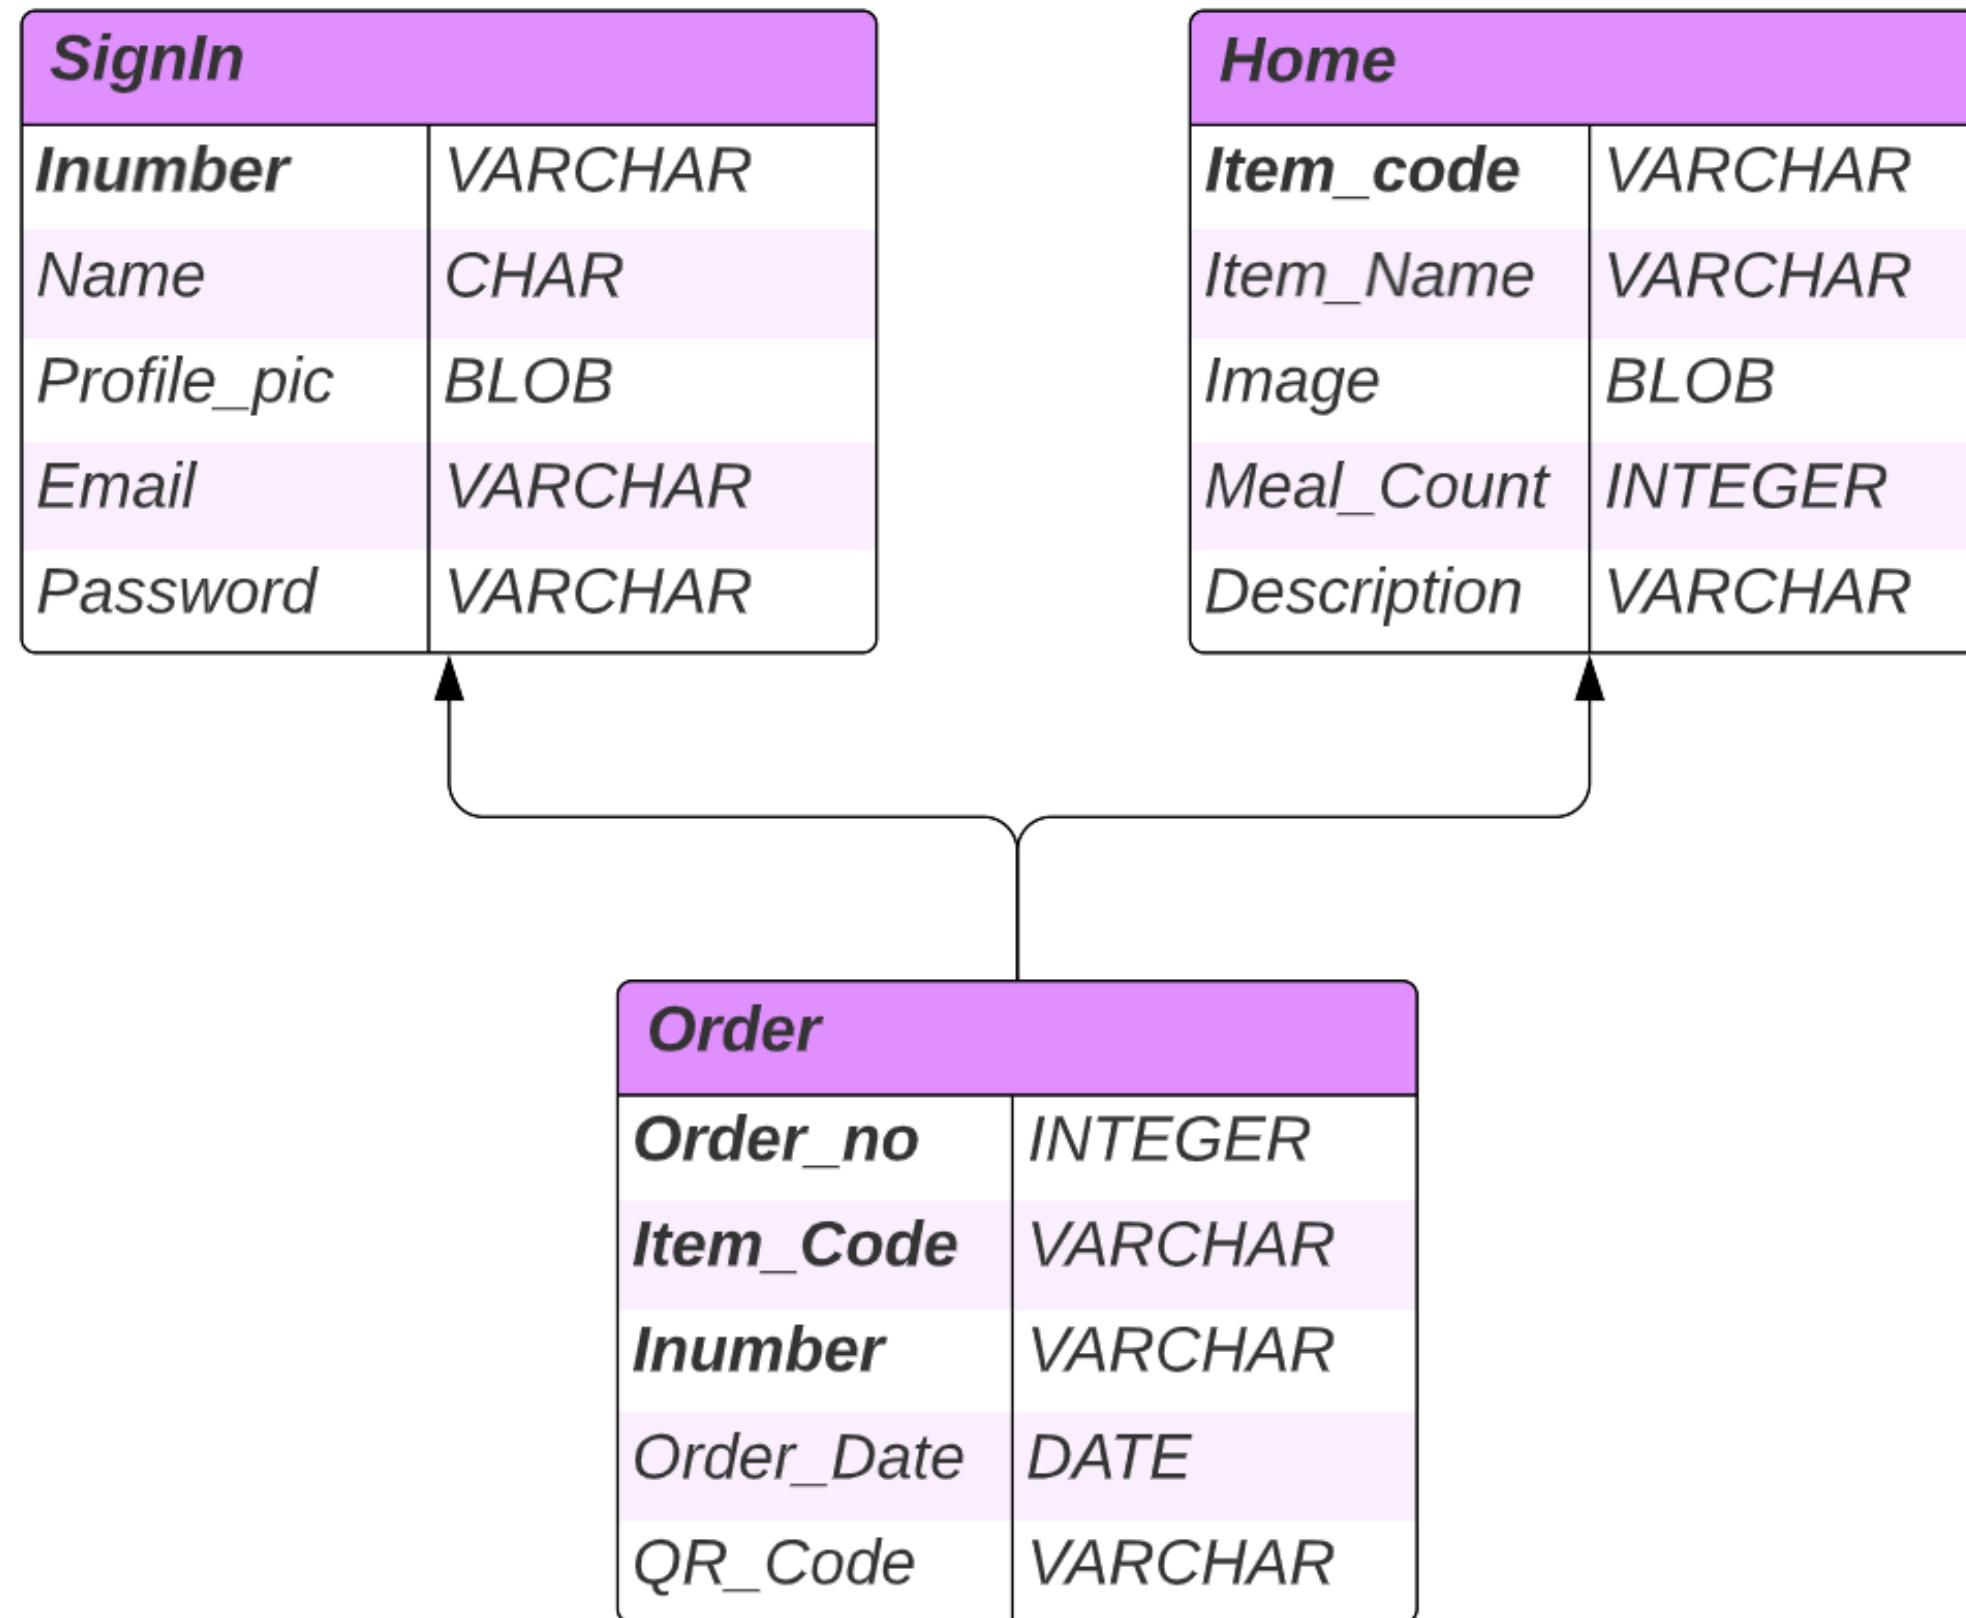

02

Users need to use the QR code generated on their application to grab their food

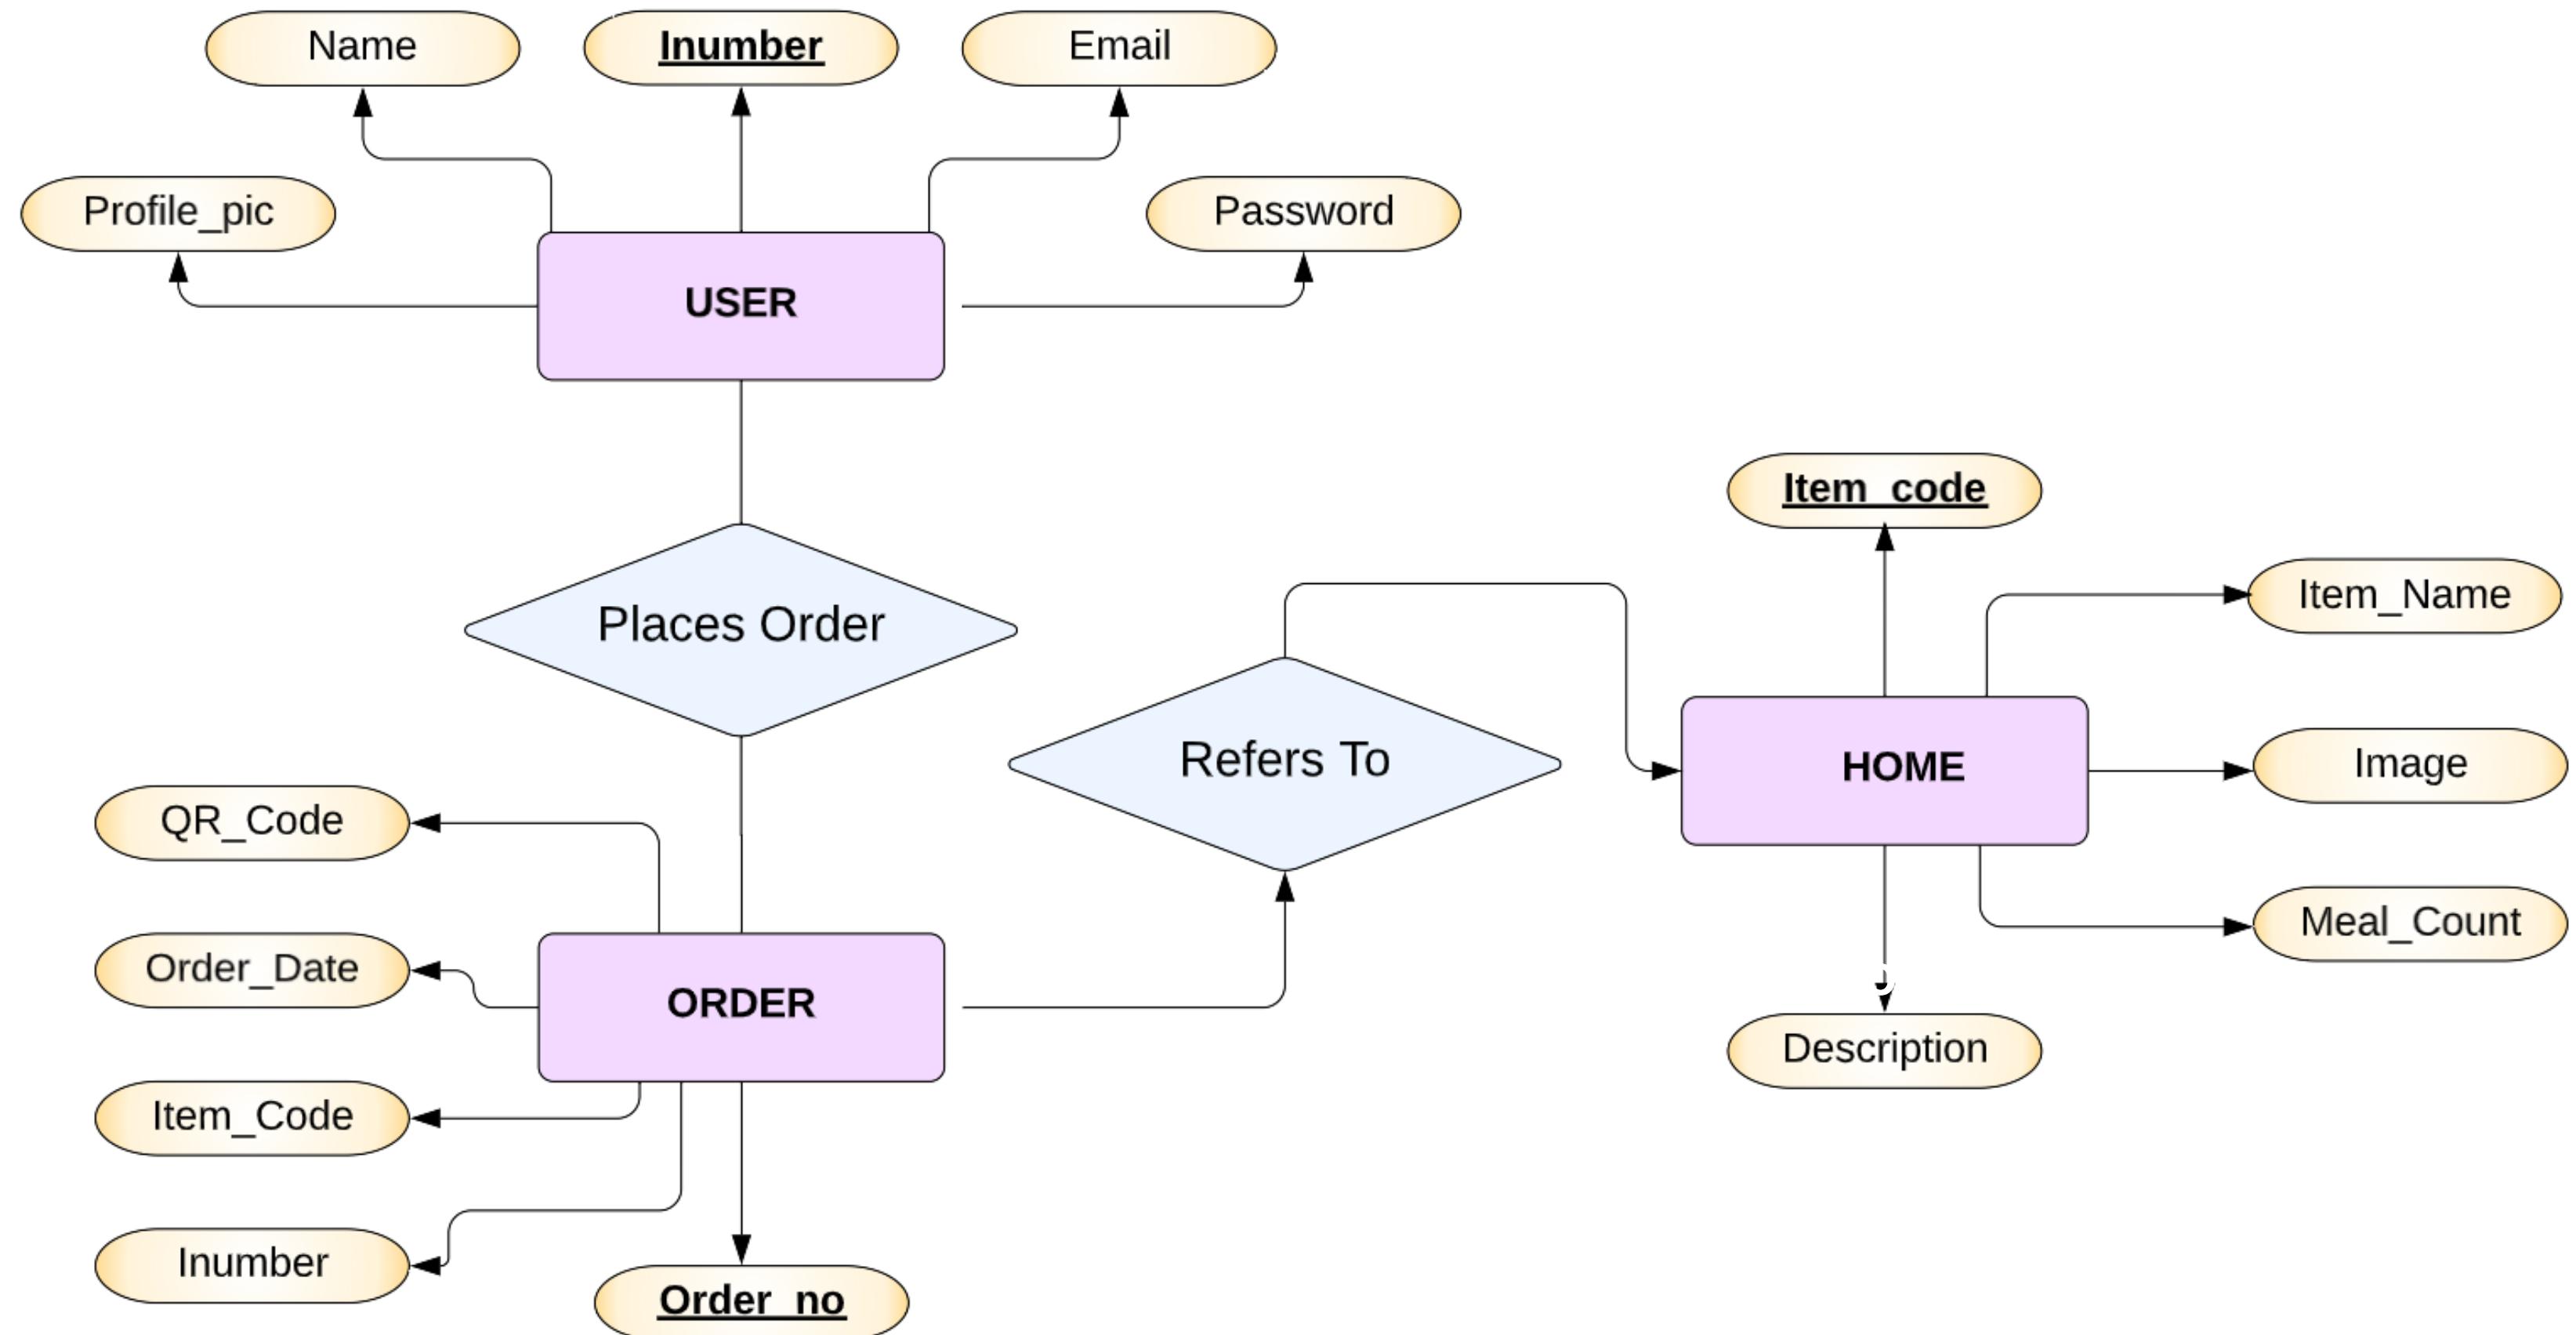

03

Make Lunch faster and happier
